Electric Mobility Europe (EMEurope) projects shall support an optimised integration of electric mobility into the transport system. Instead of working on the development of new technologies, the projects shall aim at the testing and validation of existing close-to-market technologies and concepts.

In collaboration with the European Commission and the European Green Vehicles Initiative Association, European countries and regions set up the Electric Mobility Europe Call 2016 (EMEurope Call 2016) to further promote and advance electric mobility in Europe. EMEurope builds on the experience, networks and results of the [Electromobility+ Call 2010 \(http://electromobility-plus.eu\)](http://electromobility-plus.eu) and is designed to take transnational e-mobility research and policy exchange to the next level. Funded projects in the EMEurope Call 2016 will focus on the application and implementation of e-mobility in urban and suburban areas.

This call responds to the need for transnationally coordinated Research, Technology and Innovation (RTI) to accelerate and advance the introduction and mainstreaming of electrification of mobility in Europe.

The EMEurope call will support RTI projects addressing the following key areas of electric mobility:

1. System integration (transport, (sub)urban areas)
2. Integration of urban freight and city logistics in the e-mobility
3. Smart Mobility concepts and ICT applications
4. Public Transport
5. Consumer behaviour and societal trends

In the EMEurope Call 2016 in total 14 countries and regions and the European Commission are providing national/regional research funds totalling about 23 Mio. € for coordinated funding of RTI projects.

The EMEurope Call follows a two-step submission and evaluation procedure. Project light proposals can be submitted until 6 February 2017, 17:00 CET. Project full proposals can be submitted until 9 June 2017, 17:00 CET. Proposals have to be submitted both via the [EMEurope Call Management Tool \(http://cmt-electricmobilityeurope.eu/\)](http://cmt-electricmobilityeurope.eu/) and Austrian partners via the [FFG eCall system \(http://ecall.ffg.at/\)](http://ecall.ffg.at/).
