UNITED NATIONS
Office for Outer Space Affairs

United Nations Office for Outer Space Affairs: Mandate

- The Office **implements** the decisions of the **General Assembly** and of the United Nations **Committee** on the Peaceful Uses of Outer Space (COPUOS);
- Performs **functions** of substantive **Secretariat** of the Committee on the Peaceful Uses of Outer Space and its Scientific & Technical Subcommittee and Legal Subcommittee;
- **Coordinates** the inter-agency coordination within the United Nations on the use of space technology (**UN-SPACE**);
- **Maintains** coordination and cooperation with space agencies and intergovernmental and non-governmental organizations involved in space-related activities;
- **Implements** the United Nations **Programme on Space Applications**;
- Is **responsible for** the implementation of the United Nations Platform for Space-based Information for Disaster Management and Emergency Response (**UN-SPIDER**) programme;
- Maintains the **Register of Objects Launched into Outer Space** as per the Convention on Registration of Objects Launched into Outer Space which was enacted in 1976.

UNITED NATIONS Office for Outer Space Affairs

UN-Space offers a forum for UN entities to meet and discuss matters related to the use of space technologies in their activities.

United Nations VHR Imagery Needs Survey

Q5 What is your primary field of work:

Answered: 41 Skipped: 1

United Nations VHR Imagery Needs Survey

Q9 Are you currently sharing your available satellite data or services with any other UN institutions or Member States?

Answered: 37 Skipped: 5

- Agriculture
- Infrastructure
- Environmental monitoring / natural resources
- Disaster management
- Humanitarian response
- Safety / security / peacekeeping

United Nations VHR Imagery Needs Survey

Q13 Agriculture

Answered: 26 Skipped: 16

Answer Choices

Are you trying to identify something? A crop type? Trees? Vegetation? Farmland?

Do you wish to monitor something? To measure change? Impact? Encroachment or Expansion?

Do you wish to classify an area? What do you wish to classify?

Do you want to measure something, vertical or horizontal? movement decline or development?

Do you need to forecast something?

Discovery Day: The value of Geospatial Information for improving land governance

17.12.2015

Sheikh Zayed Centre (FAO Headquarters)

Choose Language ▾

<http://www.fao.org/webcast/home/en/item/4>

The United Nations Office for Outer Space Affairs (UNOOSA), the United Nations Economic Commission for Europe (UNECE), DigitalGlobe and the Food and Agriculture Organization of the United Nations (FAO) are jointly organizing a *Discovery Day* event which will provide a high level perspective on the benefits and applications of space-based geospatial information for improving land governance, monitoring the effects of climate change and respond to emergency and crisis events.

WHAT do we bring:

1. Partnerships with providers products and solutions:
 - Satellite imagery
 - High resolution of satellite imagery
 - Very High resolution satellite imagery

WITH

- ✓ **Digital Globe**
- ✓ **China National Space Administration**
- Italian Space Agency
- Israel Space Agency
- others

MEMORANDUM OF UNDERSTANDING BETWEEN UNITED NATIONS AND DIGITALGLOBE INC.

WHEREAS the Office for Outer Space Affairs, representing the United Nations, has the mandate to promote international cooperation in the peaceful uses of outer space;

WHEREAS DigitalGlobe is a leading global provider of commercial high-resolution earth imagery products and services, and an important source of indispensable geospatial information;

WHEREAS OOSA and DigitalGlobe recognize their mutual interest in the use of earth observation technologies for economic, social and scientific development for the benefit of humankind, especially in developing countries.

...with the purpose of exploring how **high resolution satellite imagery** and **geospatial analytics** can be shared and leveraged more effectively and efficiently across the **entire United Nations System**. It is envisaged that by jointly promoting cooperation and collaboration in the area of geospatial information and analytics at the local, national and international levels, **the Parties can dramatically improve the technical and financial aspects of how the United Nations, its entities and its Member States address economic, environmental, geopolitical and societal issues of pressing importance.**

UN-SPIDER and UNDP Bhutan office support efforts to manage landslide risk in Bhutan

UN-SPIDER, UNDP and the Department of Disaster Management (DDM) (Ministry of Home and Cultural Affairs) conducted follow up activities and a training workshop as a next step after the UN-SPIDER Technical Advisory Mission (TAM) to Bhutan, offered in June 2014. The activities were executed from 17 to 21 August, 2015.

¿Dónde puedo acceder a datos satelitales y otros recursos?

¿Quiénes son los usuarios de la tecnología espacial para los desastres?

¿Qué es lo que ONU-SPIDER puede proporcionar a los Estados Miembros?

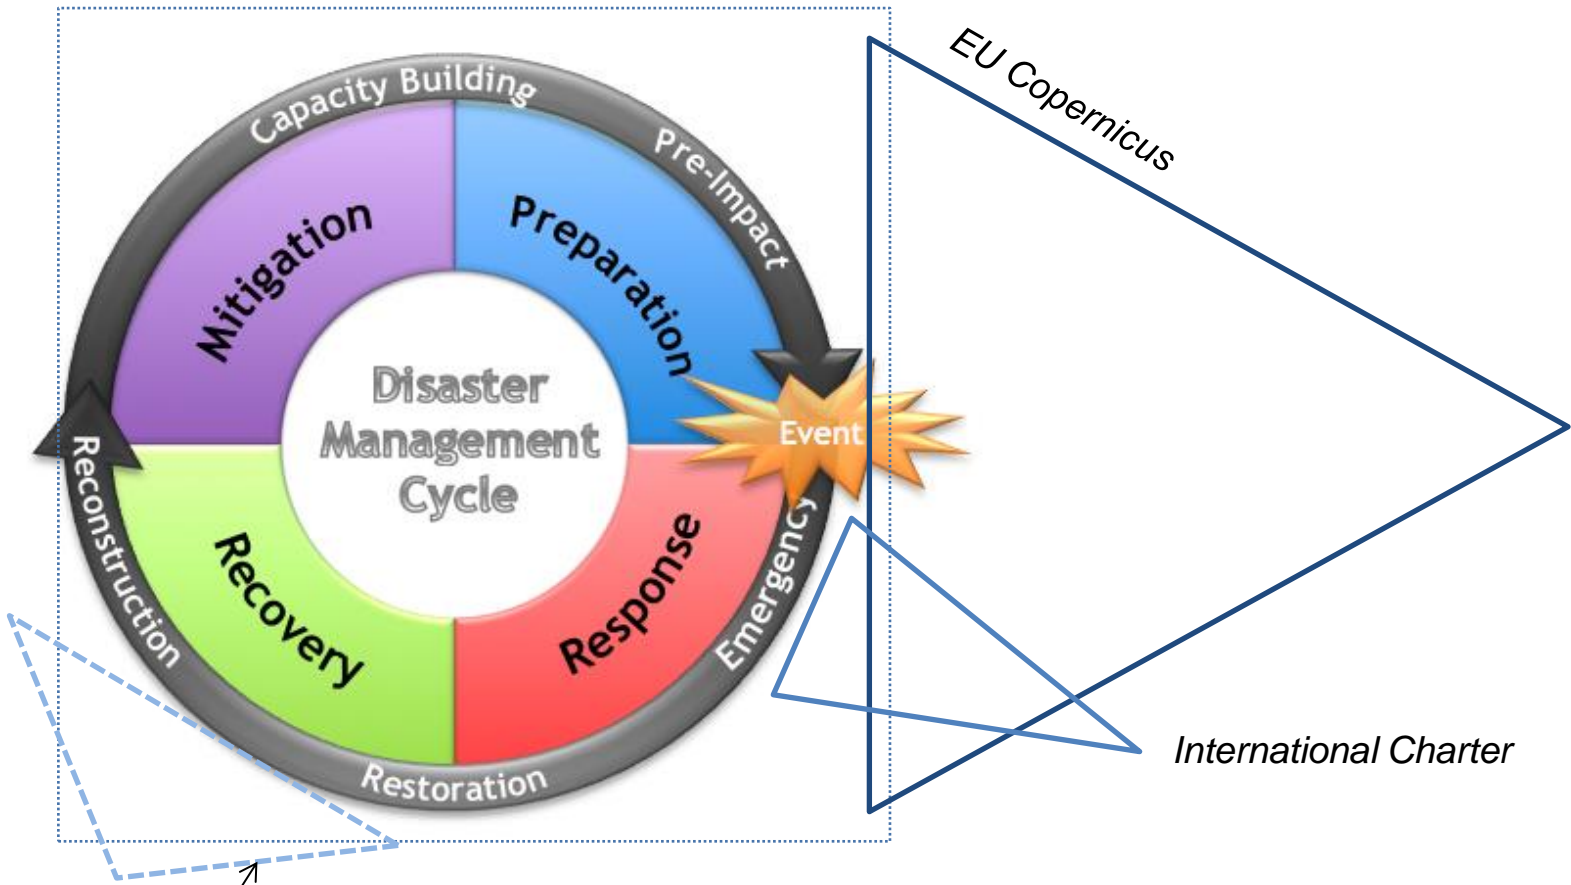

Sendai Goals

- (a) Substantially reduce global disaster **mortality** by 2030...
- (b) Substantially reduce the number of **affected** people globally by 2030...
- (c) Reduce direct disaster **economic loss** in relation to global gross domestic product (GDP) by 2030
- (d) Substantially reduce disaster damage to **critical infrastructure** and disruption of **basic services**, among them **health** and educational facilities, including through developing their resilience by 2030;
- (e) Substantially increase the number of countries with **national and local disaster risk reduction strategies** by **2020**;
- (f) Substantially enhance **international cooperation** to developing countries ...
- (g) Substantially increase the availability of and access to multi-hazard early warning systems and disaster risk information and assessments** to people by 2030.

In Focus

Space-based information for post-2015 sustainable development

2015 is a milestone year for the United Nations. Not only is the organization celebrating its 70 years of existence, the year is also the starting point for major agreements and frameworks that will shape global sustainable development in the years to come. Nations worldwide will jointly embark on new paths to end poverty, promote prosperity and well-being for all, protect the environment, address climate change and reduce disaster risks. It is in this context that the United Nations Secretary-General Ban Ki-moon has launched the "2015: Time for Global Action" campaign.

Most notable among the processes to be kicked off in 2015 are these three: The Sendai Framework for Disaster Risk Reduction (2015-2030); a new

Drought and shrinking water levels in the Jaguarí Reservoir, Brazil observed by the Landsat 8 satellite in August 2014 (image: NASA)

global agreement on climate change; and a new set of targets for economic, social and environmental development: the Sustainable Development Goals (SDGs) which are building on the Millennium Development Goals running out at the end of 2015.

Satellite technologies can be key in ensuring the successful implementation of these three frameworks. The data that satellites can collect from space provide vital input to decision-making processes as well as to monitoring and evaluation efforts. With such inputs, nations and societies can stay on track in achieving these global goals and implement their national plans with regards to disaster risk reduction, climate change adaptation and mitigation and sustainable development in its various dimensions.

The United Nations Office for Outer Space Affairs (UNOOSA), through its

UN-SPIDER programme among others, is working with governments and partners in promoting the use of reliable and objective data that satellite technologies provide - especially in developing countries. It does so through awareness raising, capacity building, technical advisory support and outreach events.

From 26 to 28 May 2015, UNOOSA/UN-SPIDER, in cooperation with the German Aerospace Center (DLR) and the German Federal Ministry for Economic Affairs and Energy, is organising the United Nations/Germany International Conference for Earth Observation. 120 international experts will convene in Bonn, Germany, to discuss and share knowledge on the use of space technologies in the context of the post-2015 agreements on disaster risk reduction, on climate change adaptation and mitigation and on the Sustainable Development Goals.

AUGUST 2015 UPDATES

UN-SPIDER at a glance

UN-SPIDER and IGAC conducted a Regional Expert Meeting in Colombia

UN-SPIDER and its Regional Support Office IGAC conducted a Regional Expert Meeting in Bogotá, Colombia from 12 to 14 August within the International Geomatic Week carried out by the Geographic Institute Agustín Codazzi (IGAC). The meeting brought together around 20 participants from the Caribbean, Central America and South America. The Regional Expert Meeting benefitted from the participation of regional and international experts from the Regional Centre for Space Science and Technology Education for Latin America and the Caribbean (CRECTEALC), the International Research Centre on El Niño Phenomena (CIIFEN), the Federal University of Santa Maria in Brazil (UFESM) and the Central American Agriculture and Livestock Committee (CAC).

Agreement between UNOOSA and the Swiss Government

The United Nations Office for Outer Space Affairs (UNOOSA) is pleased to announce an agreement with the Swiss Government to support the development of new initiatives to advance the use of space-based tools and technology in the various areas of work of Geneva-based United Nations entities, international organisations or non-governmental organisations. Funded by the Federal Department of Foreign Affairs and the Federal Department of Environment, Transport, Energy and Communications, the agreement aims at increasing awareness of the benefits of space-based tools and technology for environment and natural resource management, humanitarian affairs, peace building and security. Switzerland, a Member State of the Committee on the Peaceful Uses of Outer Space (COPUOS), hopes through this collaboration to strengthen the capabilities of Geneva-based entities in using space-based data, information, products and services.

UN-SPIDER and UNDP Bhutan office support efforts to manage landslide risk in Bhutan

The UN-SPIDER, the UNDP and the Department of Disaster Management (DDM) (Ministry of Home and Cultural Affairs) conducted follow up activities and training workshop as a next step after the UN-SPIDER Technical Advisory Mission (TAM) to Bhutan, offered in June 2014. The activities were executed from 17 to 21 August, 2015.

Soon after the TAM was conducted, the UN Resident Coordinator secured funding to implement the recommendations of the TAM through the UN joint project titled "Recovery Preparedness and Resilience-building in Bhutan". Through this funding, 19 officials from Bhutan visited the UN Affiliated Centre for Space Science Technology Education in Asia and the Pacific in India to attend one week training programme titled "Response and recovery preparedness" in April 2015. This training provided general understanding on the role of space based information in managing various hazards in Bhutan.

SPACE AGENDA TODAY: greening space

Mitigating Space Debris

In 2007, COPUOS achieved a major result by adopting its own **Space Debris Mitigation Guidelines**. There is general agreement among States that the implementation of these voluntary guidelines for the mitigation of space debris at the national level would increase mutual understanding on acceptable activities in space, thus enhancing stability in space and decreasing the likelihood of friction and conflict.

SPACE AGENDA TODAY: Space weather

SPACE AGENDA TODAY: Threats from asteroids

Near-Earth Objects (NEOs) are asteroids, comets and large meteoroids whose orbit intersects

the Earth's orbit and may therefore pose a danger of collision. NEOs with a diameter of over 1 km hit the Earth a few times in a million years.

COPUOS works on establishing international procedures and decision-making mechanisms for dealing with a potential NEO threat.
