

The EO4HumEn Project

- Support humanitarian operations by geospatial information products
 - Cooperation of University of Salzburg (Dep. of Geoinformatics - Z_GIS, Dep. of Geography and Geology), MSF Austria, University Tübingen (Dep. of Geography)
 - Oct 2013 – March 2016

- ‚Operational‘ service for refugee/IDP camps

Population monitoring

supported by Karl Kahane Foundation since 2012,
further developments within EO4HumEn

- In development

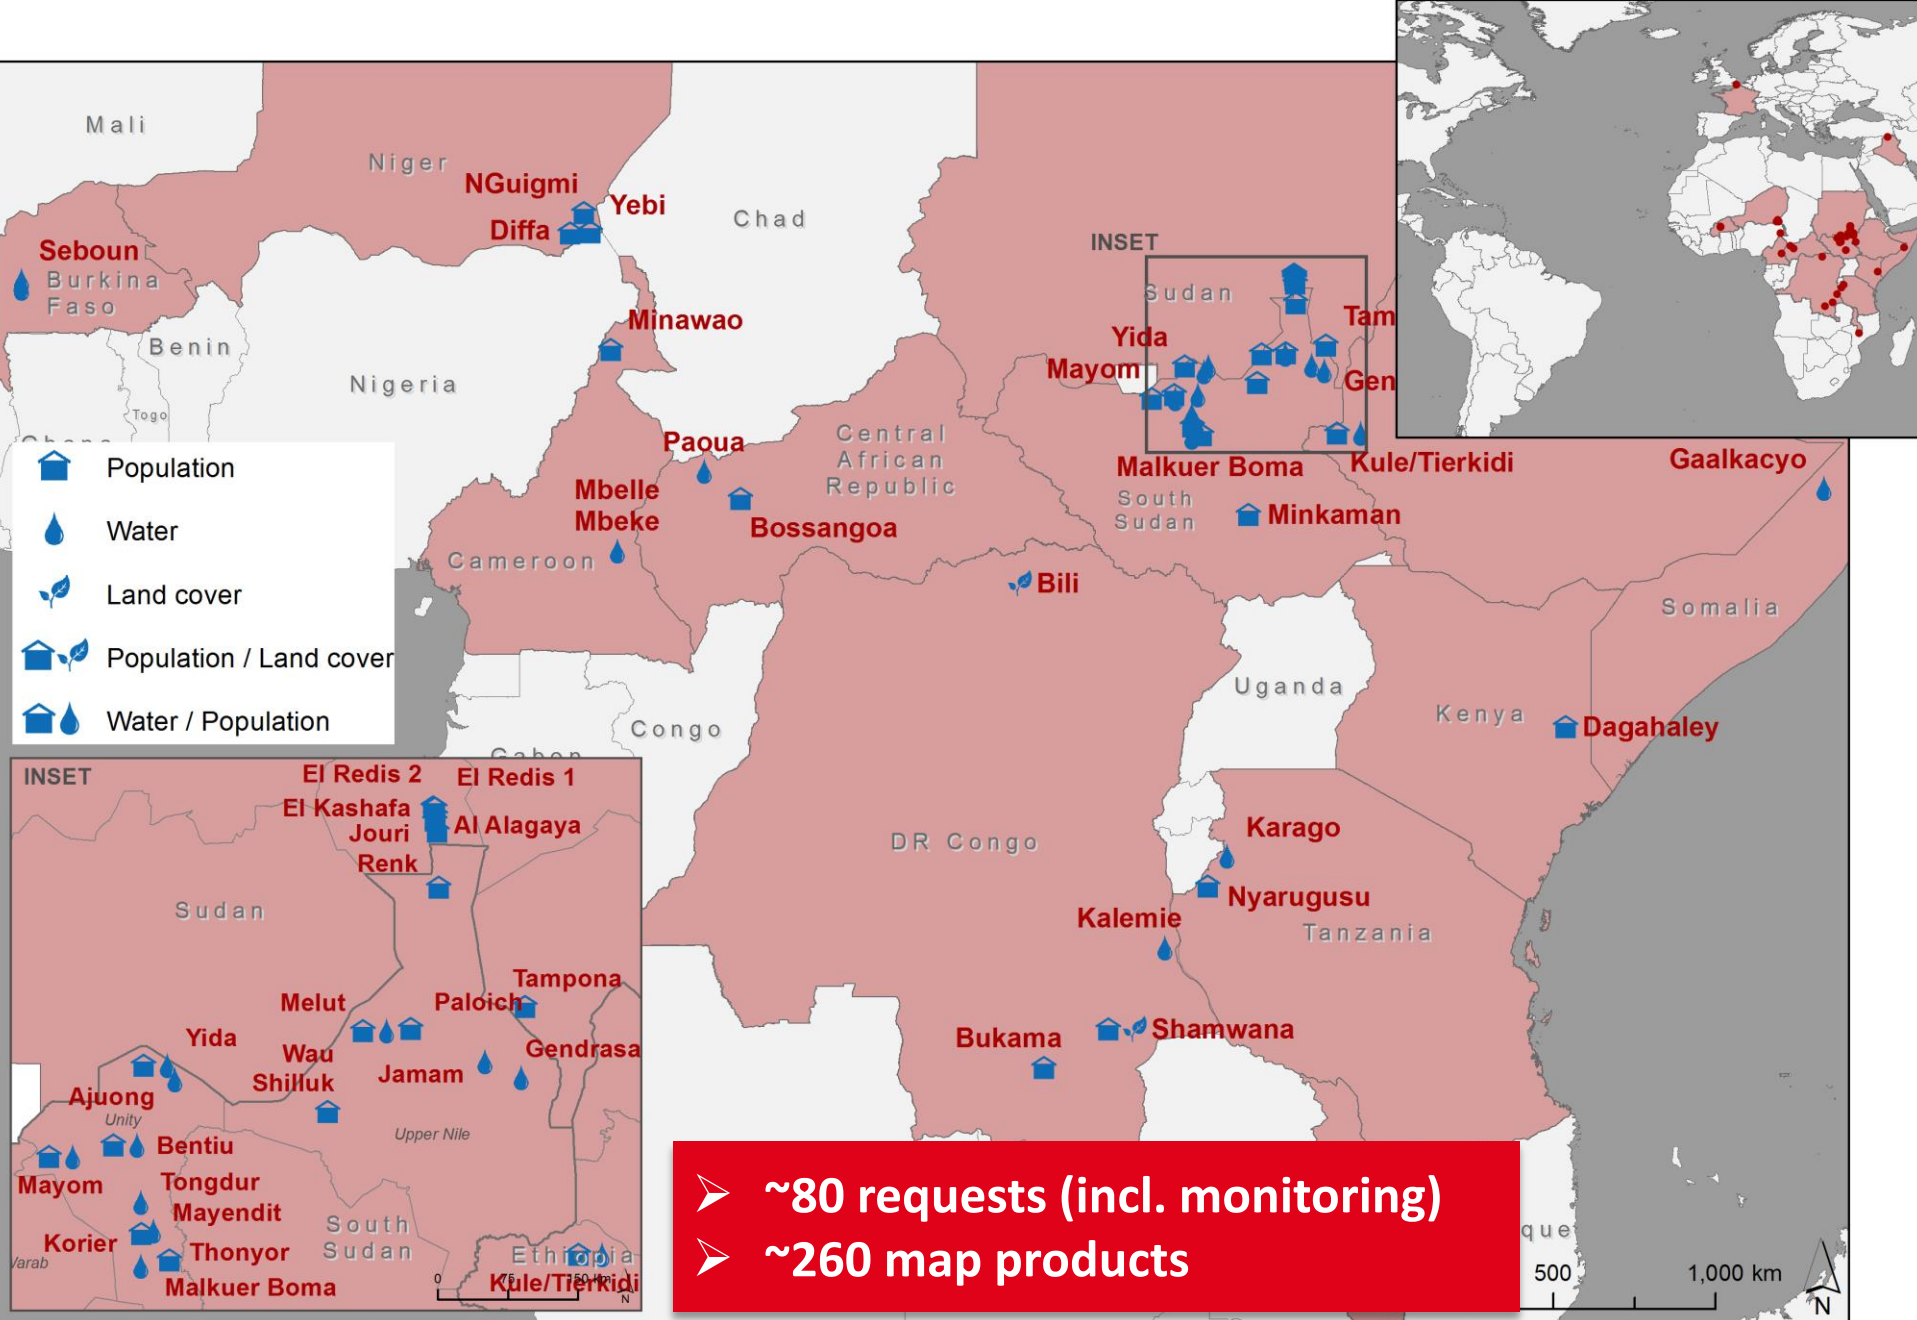

Groundwater exploration

Environmental impact assessment

Information requests July 2011 – April 2015

Population monitoring

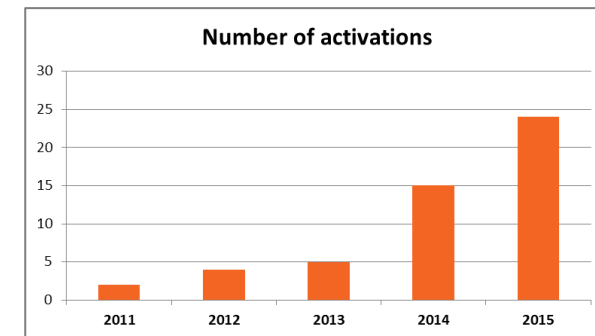

Population monitoring

- Amount and spatial distribution of different dwelling types in refugee/IDP camps based on VHR satellite data
- Initial research started in 2006
- 50 requests (~130 maps) in 12 countries since 2011, including regular monitoring
- Applied under various situations
 - MSF not yet on site
 - Camps in the setup phase (highly dynamic)
 - Semi-permanent camps, but still spontaneous influx

Peter Biro/IRC

EO-based camp population monitoring

1 User request

2 Data integration

- (Multi-temporal) very high-resolution satellite imagery (orthorectified, pansharpened)
- Camp zoning, camp block information, camp infrastructure etc. [if available]

3 Dwelling extraction

- Tent
- Tent (covered with blue plastic sheeting)
- Other dwelling
- Large tent/building

Object-based image analysis (OBIA)

- different dwelling types

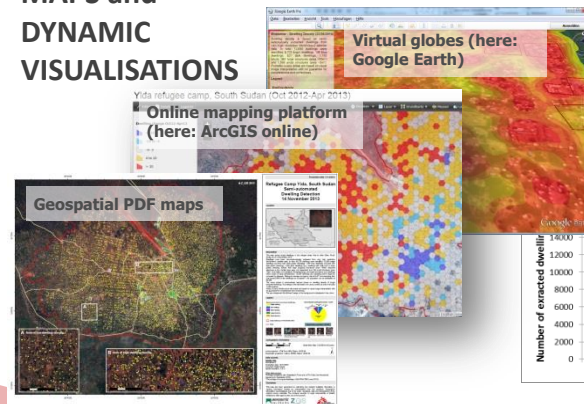

4 Spatial analysis

- Dwelling density
- Camp outline
- Camp structure (e.g. based on distribution of different dwelling types)
- Distance analysis (e.g. amount of dwellings within a certain distance of latrines)
- Dwelling change (for multi-temporal data)

5 Information delivery

MAPS and DYNAMIC VISUALISATIONS

FIGURES and GRAPHS

		tukul	tent
Automatically extracted dwelling structures	Number of dwellings	7,670	5,687
	Total dwellings	13,357	
Population estimation	Scenario I	45,758	
	Scenario II	51,445	
	Scenario III	64,802	
Population figures from SpRC		>= 50,000	

Integrated workflow for information delivery

Up-to-date and custom-tailored information products

Automated dwelling extraction

reduce work effort for large camps or monitoring tasks

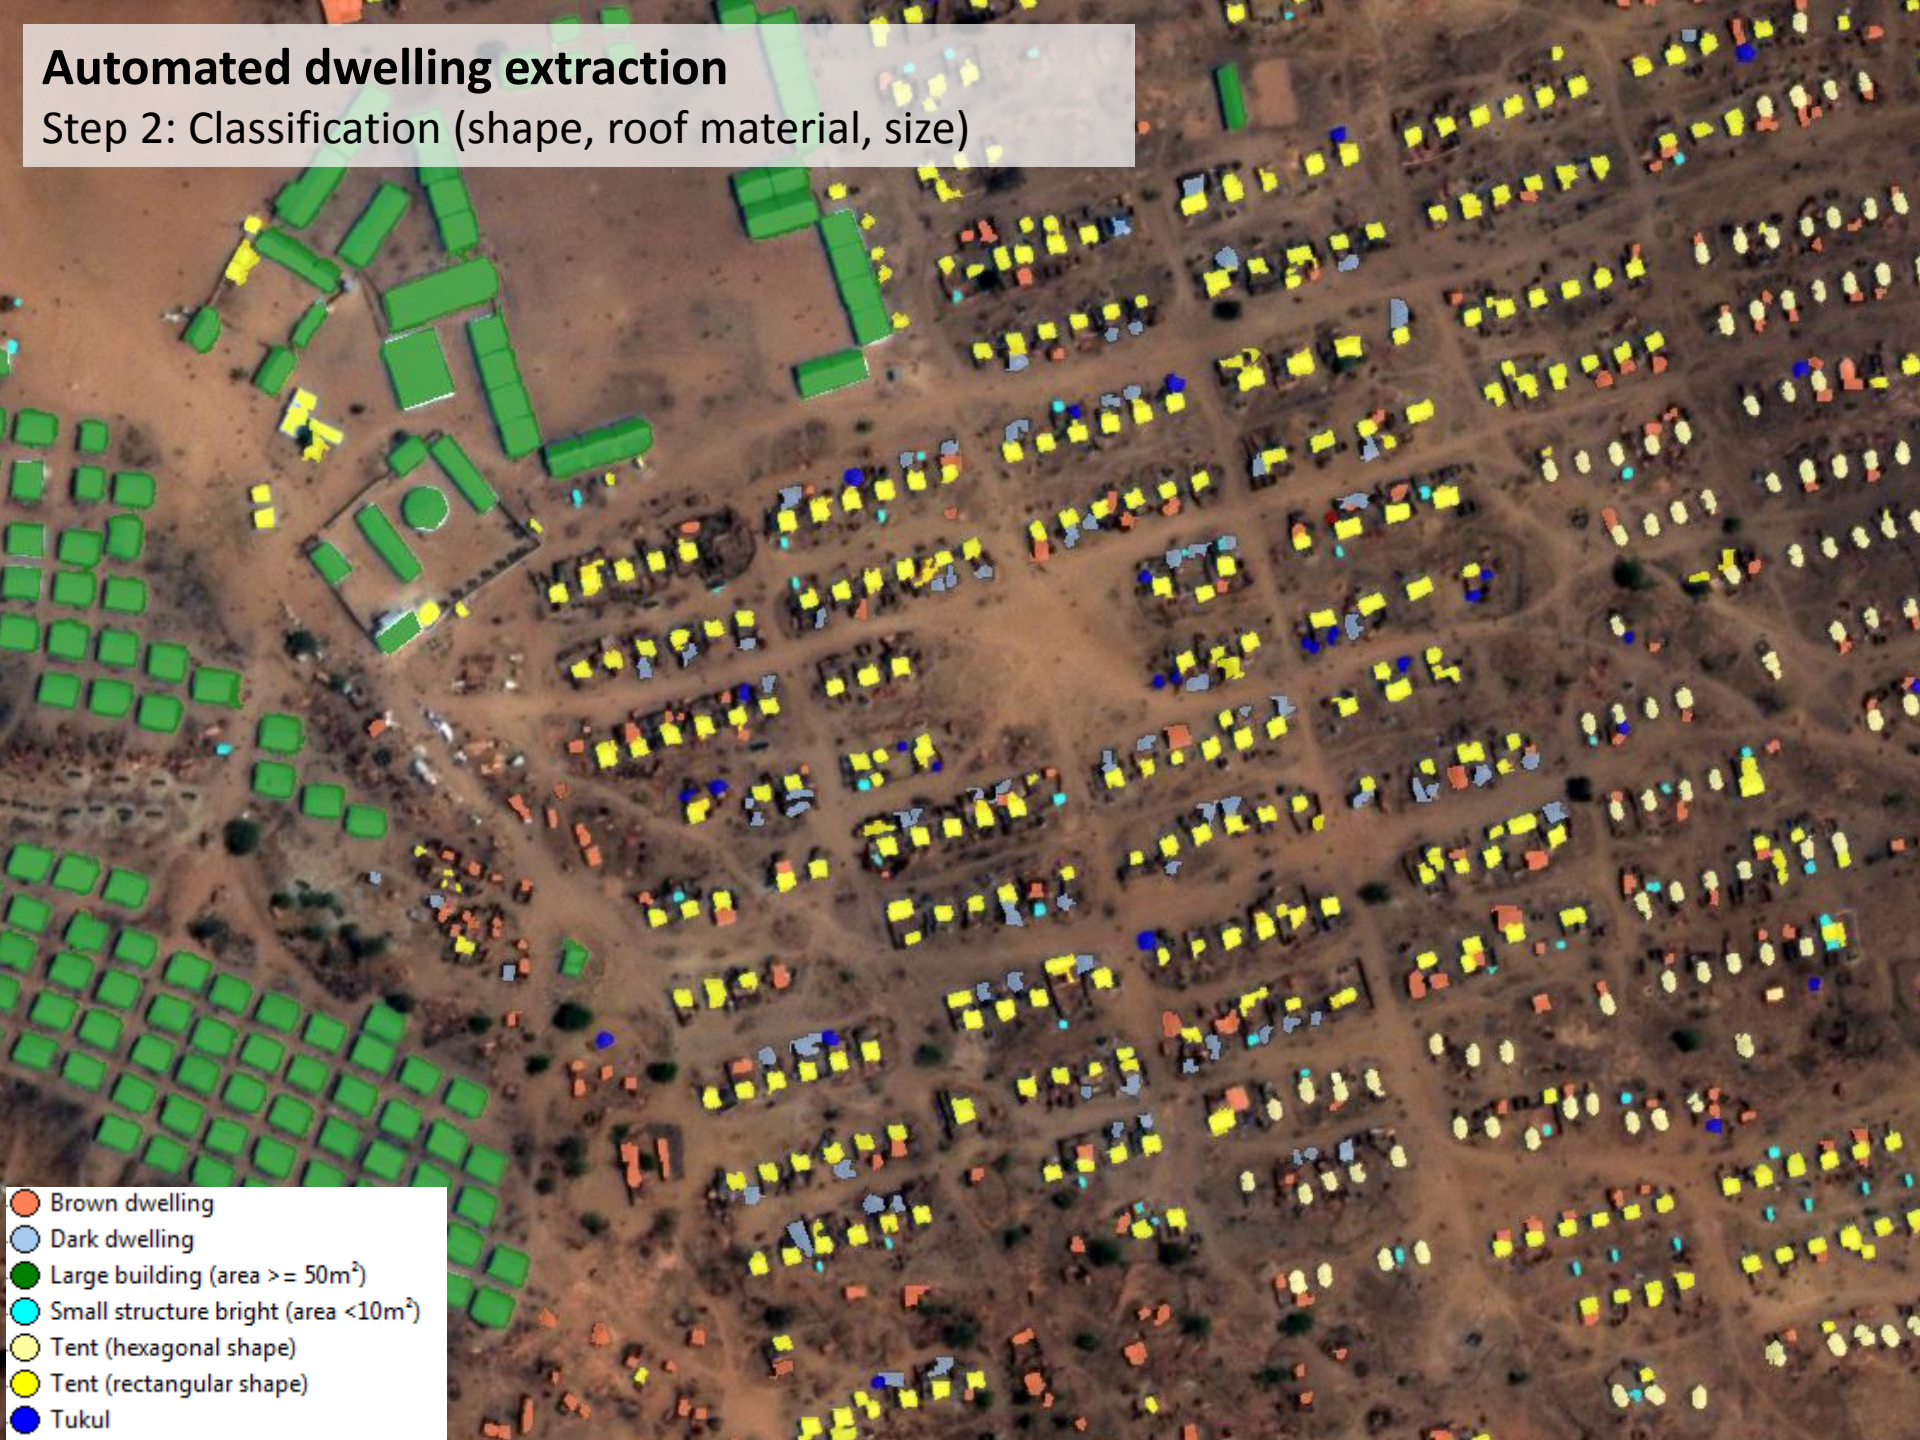

Automated dwelling extraction

Step 1: Segmentation

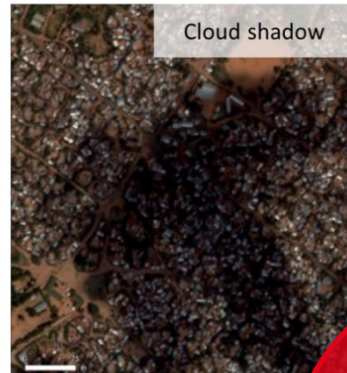

Automated dwelling extraction

Step 2: Classification (shape, roof material, size)

- Brown dwelling
- Dark dwelling
- Large building (area $\geq 50\text{m}^2$)
- Small structure bright (area $<10\text{m}^2$)
- Tent (hexagonal shape)
- Tent (rectangular shape)
- Tukul

Robustness and degree of automation

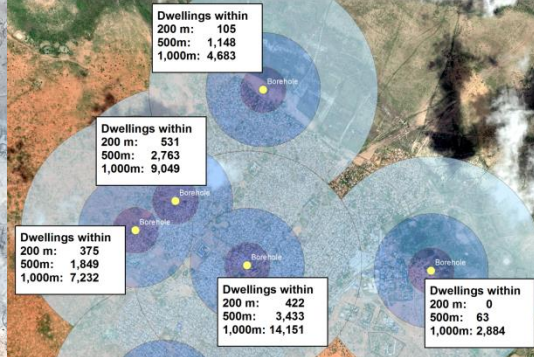

High degree of automation (and its prerequisites)

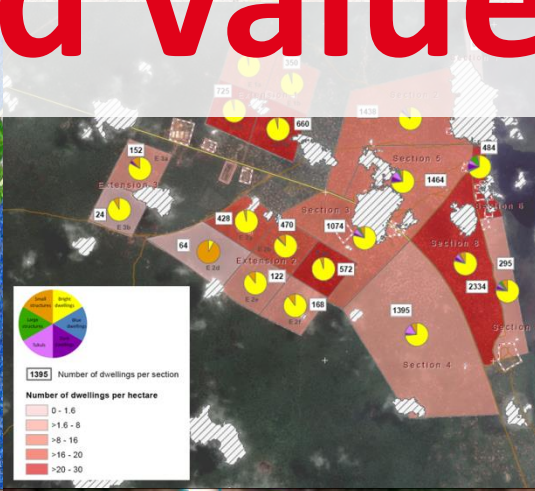

Low degree of automation (and its constraints)

Manual refinement!

Added value products

Population estimation in urban areas

LiDAR data

VHR satellite image

3D built-up area

Single buildings
(average
building
footprint)

Exclusion areas
(e.g. commercial buildings):
OpenStreetMap

Survey

Storey height

Number of households per building

Average family size

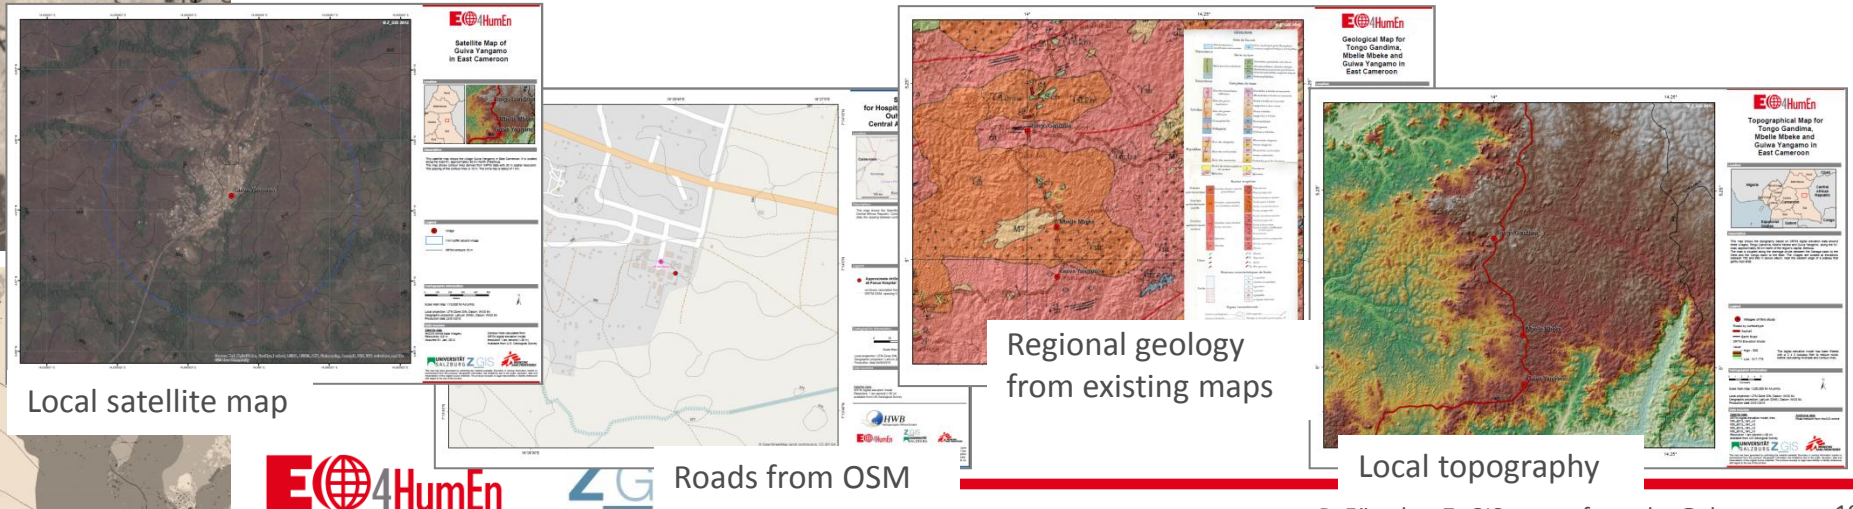

16%: 1 family/storey
65%: 4-6 families/building
10%: no residential
9%: 1 family/building
40%: 1-2 persons/family
60%: 3.47 persons/family

Groundwater exploration

Groundwater exploration

- Aim: support drinking water supply in refugee/IDP camps
 - Remote sensing data analysis can provide information on local hydrogeology
 - Close cooperation with field work essential
→ cooperation with *Hydrogeologists without Borders UK* (HWB-UK)
- 7 requests in 7 countries at 15 sites, 52 maps

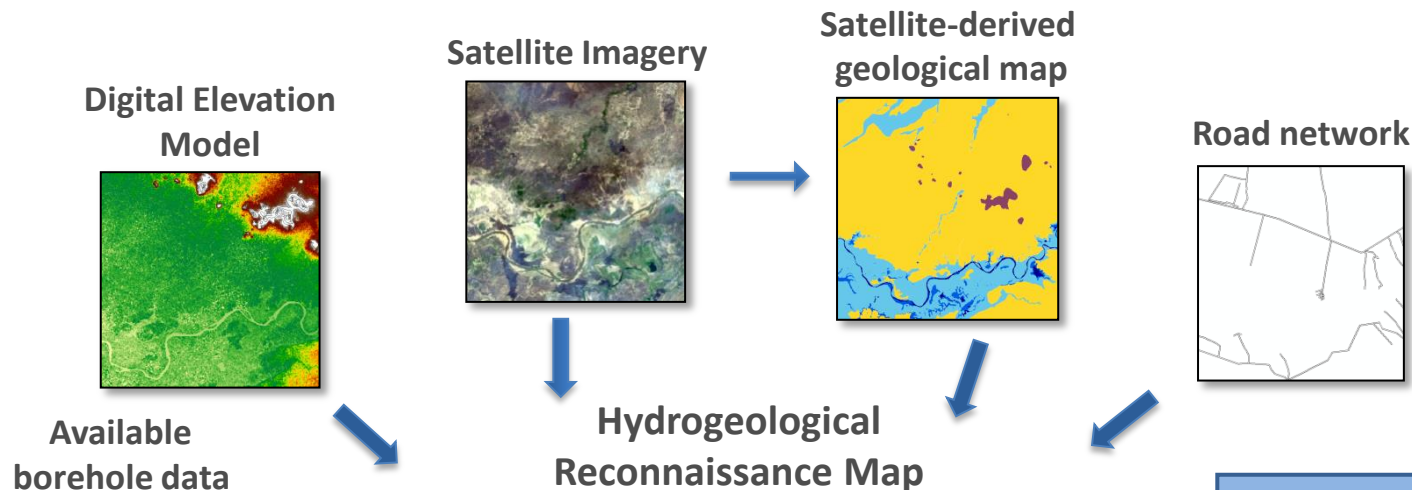

Local satellite map

Regional geology from existing maps

Local topography

Hydrogeological Mapping

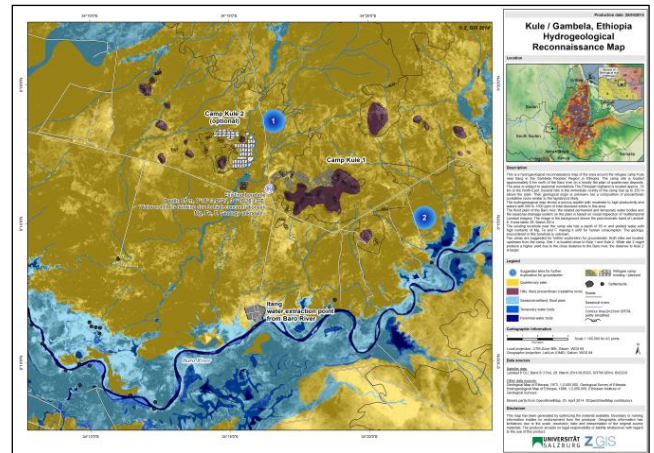

Available borehole data

Available geological maps

Hydrogeological Reconnaissance Map

+ Expert evaluation

Benefits

- reduced field work
- overview to pre-existing knowledge
- locations of potential drilling sites, or
- recommendations for further investigations

Environmental Impact Assessment

Environmental Impact Assessment

8 sites, 53 maps

- Multi-temporal HR/VHR optical satellite data
- 3-stage approach

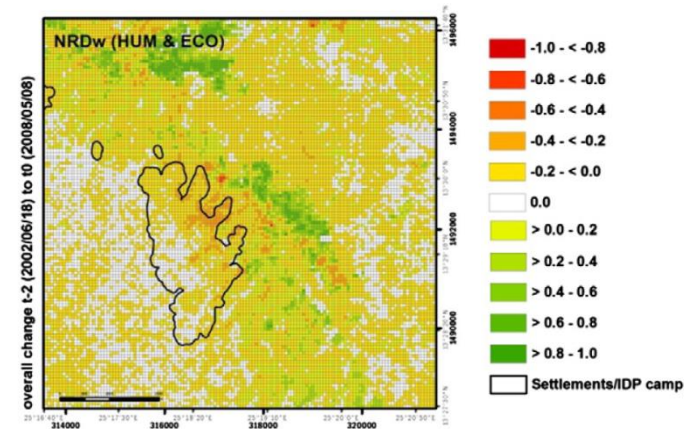

1.stage: Vegetation mask (+ change)

2.stage: Detailed analysis of land use / land cover (+ change)

3.stage: Evaluation of impact on human well-being and ecosystem integrity

Degree of automation

Degree of expert input

2013

Thank you for your attention!

Petra Füreder

University of Salzburg | Department of Geoinformatics - Z_GIS
