

COMET: K1 Centre

VRVis K1	
VRVis K1 Centre for Visual Computing	
Main location	Vienna
Other locations	Graz (Styria)
Research programme	Visual Computing, Multiple Senses, Visualization, Visual Analysis
Planned realisation and outcomes	
<p>Good and correct decisions are the basis for success. In 2025 we will be able to use visualization and further human senses and output modalities beyond the desktop to enable effective and efficient workflows for applications requiring the human in the loop. We will have increased decision confidence based on complex data from e.g. medicine, environment, production, development and IoT in the presence of uncertainty while overcoming analytical limitations imposed by volume, velocity and variety of data. VRVis will provide with its more than 70 researchers expertise and research capabilities in order to transfer disruptive and innovative 3D technologies to our partners, and perform internationally renowned research.</p>	
History of establishment	Founded in 2000 as in the funding programme Kplus, from 2008 – 2010 VSOE funding, since 2010 COMET K1 Center.
