

AAL PACKAGES/ INTEGRATED SOLUTIONS

Packages integrating different solutions based on ICT to support active, healthy and independent living of older adults

Dr. Gerda Geyer

AAL Programme Strategy

... In the AAL Programme, we promote **business, technology and social innovation**, especially that based on ICT, to ensure that products, systems and services give **effective support to older adults in their everyday lives**. These solutions are being used by or for older people to enhance their quality of life in the context of active and healthy ageing. ...

Unmet needs

Increasingly, end-users are asking for well integrated solutions that are intuitively useful, personalized, and take into consideration the life span dimension. This includes informal and formal caregivers whenever relevant.

In addition, end-users, especially secondary and tertiary ones such as caregivers and policy makers, have an urgent need for proven evidence about the effects and effectiveness of AAL solutions.

... also ...

Many solutions have been developed, but are not integrated with other solutions, are not sufficiently incorporated into every day's life, and have not been evaluated sufficiently.

The aim of this call is to support

- innovative,
- transnational and
- multi-disciplinary collaborative projects.

The proposal must demonstrate a clear route to market and added-value for the different types of end-users.

The focus of the 2017 call challenge of the AAL Programme is twofold

1. The challenge lies in developing packages integrating different solutions that address the needs and wishes of end-users and add value to their lives. Since peoples' wishes, aspirations, and needs evolve over time, packages should be designed with built-in flexibility and a variety of components in order to meet diverse individual situations and to remain attractive to end-users over time. End-users expect proposed solutions to be affordable, user-friendly, secure, and reliable. Packages should be based on existing and/or open platforms.

2. The challenge lies in extensive testing and evaluating of packages in order to provide meaningful and significant results.
